

1                                    ABSTRACT OF THE DISCLOSURE

2

3    The invention is directed to a method of making a small crystal SSZ-32  
4    zeolite, known as SSZ-32X. The catalyst is suitable for use in a process  
5    whereby a feed including straight chain and slightly branched paraffins having  
6    10 or more carbon atoms is dewaxed to produce an isomerized product, with  
7    increased yield of isomerized material and decreased production of light ends.
